

ABSTRACT OF THE DISCLOSURE

Vehicle seat (1), in particular for a passenger car, having a backrest (3) and a head restraint (7) which is arranged at the upper end of the said backrest and has a head restraint rear part (9) mounted essentially rigidly in the backrest, and
5 a head restraint front part (13) which can be pivoted about an essentially horizontal rotational axis (15), in particular at the upper end of the head restraint rear part, having at least one driving device (17, 19, 21) for pivoting the head restraint front part forwards about the rotational axis by a large angular amount in response to a first control signal indicating a vehicle impact, and by settable angular amounts in
10 response to a second control signal indicating a desired inclination of the head restraint, for adjusting the inclination.
